

BONUMAHANTHI CHANDRASEKHAR

SENIOR SOFTWARE ENGINEER

6304984975 | bonumahanthi@gmail.com | Vizianagaram, Andhra Pradesh, India | linkedin.com/in/chandrasekhhar-bonumahanthi-5407a51b9

SUMMARY

Senior Software Engineer with hands-on experience building and evaluating reproducible software environments for AI model training, alongside a backend engineering background in Java and Python across fintech and payments systems. Skilled in algorithms and data structures, debugging complex systems, feature implementation, codebase refactoring, and performance optimization. Currently authoring containerized reinforcement-learning evaluation tasks with golden reference solutions and automated verifiers for a frontier-model benchmarking program.

SKILLS

Languages: Python3, Java, SQL / PL-SQL

Core Strengths: Algorithms & Data Structures, Debugging & Root-Cause Analysis, Bug Fixing, Feature Implementation, Codebase Refactoring, Performance Optimization, System Scalability, Agile Practices

Frameworks / Infra: Spring Boot, Kafka, REST APIs, Microservices, AWS, Docker, Kubernetes, Helm, CI/CD (GitHub Actions), pytest

EXPERIENCE

Software Engineer — AI Evaluation (Freelance)

08/2026 – Present

Handshake AI — Project Dynamo

Remote

Benchmark programme measuring the coding ability of frontier AI models, building reproducible task environments and golden reference solutions.

- Authored 8 containerized reinforcement-learning evaluation tasks, all accepted, spanning 8 engineering domains including security, machine learning, and data processing — each pairing a multi-module Python service, a golden reference solution, and an automated pass/fail verifier.
- Built Docker evaluation environments and hardened verifier harnesses that execute untrusted third-party code under dropped privileges, sealed filesystems, and symlink-safe file I/O.
- Drove every submission through a 15-stage GitHub Actions pipeline covering static analysis, containerized validation, and live trial runs; diagnosed and cleared blocking failures — direct bug-fixing and debugging work under pipeline constraints.
- Applied per-rule mutation testing, up to 58 single-clause mutants per task, to prove every specified rule was enforced by the verifier suite, and documented the technical reasoning behind each solution and test design.

Application Developer

11/2024 – Present

HPS

Pune, India

- Developed and refactored scalable backend microservices in Java and Spring Boot for fintech and payment applications, improving maintainability and long-term reliability.
- Built features across payments and cards systems — Switch, Acquirer, and Issuer platforms, and Mastercard integrations (Version 3 and Version 4).
- Designed Kafka-based asynchronous, event-driven workflows for transaction processing, and deployed containerized services with Docker, Kubernetes, and Helm in production.
- Performed production support and root-cause analysis on critical issues; contributed to CI/CD automation and deployment reliability.

Java Backend Developer

11/2023 – 10/2024

PreSecure Solutions

Pune, India

- Developed backend services and REST APIs using Java, Spring Boot, and SQL; implemented new business logic and API integrations from conception through delivery.
- Optimized SQL queries and backend workflows to improve application performance.
- Resolved production issues and worked in Agile with code reviews and Git workflows.

KEY ACHIEVEMENTS

Microservices Migration: Refactored a monolithic application into a microservices architecture, improving scalability and maintainability.

Deployment Automation: Automated deployment processes, reducing downtime and increasing application reliability by 30%.

EDUCATION

B.Tech in Mechanical Engineering

08/2019 – 06/2023

National Institute of Technology Srinagar

Srinagar, India
